

DERMAL FILLERS:

Juvederm®, Restylane® and Perlane®:

All of our fillers are FDA approved. They are natural cosmetic dermal (skin) fillers that restore volume and fullness to the skin to correct deep facial wrinkles and folds. The most frequent areas for injection include the lines running from the nose to the mouth (nasolabial folds), folds at the mouth edges and for lip or cheek enhancement. Deep glabellar lines (the lines between the eyebrows) are also an ideal area for treatment with fillers.

Made from a molecule that occurs naturally in the human body, there is no risk of allergic reaction in patients with animal allergies thus no skin test is needed. Results last longer since they do not break down quickly.
